Wear Life is an indicator that compares all chains to a STD chain. *Standard Chain = 100*. Eg: 520S0 with a wear index of 800 should last 8 times longer than 520STD on a 400cc motorcycle.

Note: This chain application guide is a conservative recommendation only.

To ensure the best wear life of your chain, it is advisable to clean, lubricate and check the chain tension every 300kms or less depending on conditions. Suitable chain lubes are **MOTUL'S Chain Lube** and **Chain Lube Plus** for Road use and **Motyl Chain** for Off Road use.
